

Safety steps to avoid and reduce coronavirus SARS-CoV-2 infection.

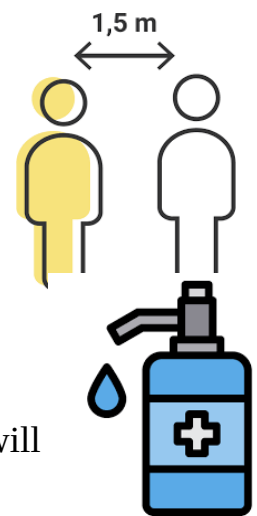

In this page we show the guidelines and recommendations that will be employed in the touristic activities (routes and workshops) we offer, in order to minimize the hygienic risks caused by SARS-CoV-2 virus during the route development.

- Mask use is obligatory during the whole activity.

- Avoid physical contact with the guide and others doing the activity, as long as it's possible.

- Respect the 1'5 meters safety distance in the places and zones that allow for it.

-In those activities which the use of the 4x4 vehicle is included, the guide will provide hydroalcoholic gel to everyone before entering the vehicle and in each stop.

- The vehicle and the used material (binoculars, kayak, paddle, oar...) will be sanitized before and after its use.

-The glasses given by the guide during the activity will be personal and single use.

- During the 4x4 route, the vehicle will be constantly aired out, and if it's a problem to the client, the vehicle will be aired out during the stops, as it's a short-distance route.

- Maximum capacity of each place visited will be respected, for example in the viewpoints.
